# **RipEX – Radio modems**

**RipEX** is a **radio modem platform** renowned for overall data throughput in any real-time environment. RipEX radio modems are native IP devices, Software Defined with Linux OS that have been designed with attention to detail, performance and quality. All relevant state-of-the-art concepts have been carefully implemented.

**RipEX, 1st generation**, is a best-in-class **compact radio modem** proven within the market since 2011 and used in thousands of installations.

**RipEX2, 2nd generation**, was introduced in 2018. This **more powerful standard radio modem** provides significant improvements, especially in terms of data speed, security and number of interfaces.

### RipEX2

- 1.7 Mbps / 300 kHz / 256QAM
- 4× ETH, 1× SFP, 1× COM, 1× USB,
- RipEX compatible
- All RipEX features plus:
  - 6.25 300 kHz channel size
  - ACM, Adaptive FEC
  - RADIUS
  - HW tamper proof
  - Expansion ready mPCle
  - Full-duplex

**RipEX-HS**, a **fully redundant** 19' hot-standby **master station** with two radios and two power supplies and available for both, RipEX and RipEX2, is the final member of the RipEX family.

All RipEX devices provide a 24/7 reliable service for mission-critical applications like SCADA & Telemetry for Electric and Water Utilities, Oil & Gas distribution and many other applications.

### **RipEX**

- 166 kbps / 50 kHz / 16DEQAM
- 1× ETH, 2× COM, 1× USB
- Solar ready
- 0.1 10 watts
- - 40 to +70 °C
- WiFi management
- Customized protocols
- Backup routes
- Fast remote access
- IPsec

#### **General overview**

|                          | RipEX                     | RipEX2                            |
|--------------------------|---------------------------|-----------------------------------|
| Max. Gross data rate     | 166 kbps                  | 1.7 Mbps                          |
| Gross data rate / 25 kHz | 83 kbps                   | 167 kbps                          |
| Interfaces               | 1x ETH,<br>2x COM, 1x USB | 4x ETH, 1x SFP,<br>1x COM, 1x USB |
| lPsec                    | Yes                       | Yes                               |
| RADIUS                   | No                        | Yes                               |
| Modulations              | CPFSK - 16DEQAM           | CPFSK - 256QAM                    |
| Channel size             | 6.25 - 50 kHz             | 6.25 - 300 kHz                    |
| Stream mode              | Yes                       | No                                |
| Full duplex              | No                        | Yes                               |

#### Native IP device

**Bridge mode** – uses a **Transparent protocol** on the Radio channel, i.e. packets received on any interface are broadcast to the respective interfaces on all units in the network. Packets received on COM are broadcast to all COM's at all remote sites, allowing you to connect more RTU's to each remote unit.

**Router mode** – RipEX works as a standard IP Router with all interfaces (Radio and 1-5 Ethernets) and all COM ports without any compromise. Each of the five Ethernet ports on RipEX2 can be configured either as a switch or a router. There is an option of two protocols on the Radio channel: **Flexible** – unlimited anti-collision meshing without base stations or **Base driven** where all packet transmissions are managed by the local base station.

- Switch switched or routed Ethernet ports (RipEX2)
- Terminal server Serial-Ethernet converters, 5 independent sessions
- TCP proxy converts TCP to UDP, eliminates transfer of TCP overhead
- ARP proxy any IP address simulating (for RTU's without routing capabilities within the same subnet)
- Subnets unlimited number of virtual Ethernet interfaces (IP aliases)
- Shaping traffic management between Ethernet and Radio interface
- IPsec, GRE, Firewall, DHCP, VLAN, NAPT, QoS...

### Data speed & Throughput

- Possible Network throughput is achieved by
  - Min. Rx/Tx switching and synchronization times
  - Optimum Radio protocol for the application
  - Optimization
    - payload data and headers compression
    - packet flow optimization on Radio channel
- Different data speeds for individual links
- Auto-speed receiver is automatically adjusted to the data rate of the incoming frame
- ACM and Adaptive FEC (RipEX2)
- Stream mode transmitting starts immediately on the Radio channel, without waiting for the end of the received frame on COM => zero latency

### Security & Integrity

- Licensed radio bands
- FEC, interleaving, proprietary data compression
- CRC32 data integrity control on Radio channel
- Proprietary protocol on Radio channel
- Backup routes
- Digitally signed FW (RipEX2)
- Management https, ssh,
- Role-based access control
- AES256 encryption
- IPsec encrypted end-to-end tunnel
- Firewall Layer 2 MAC, Layer 3 IP, Layer 4 TCP/UDP

| Channel size | Gross data rate |          | Possible Net | twork throughput |
|--------------|-----------------|----------|--------------|------------------|
|              | RipEX           | RipEX2   | RipEX        | RipEX2           |
| 6.25 kHz     | 21 kbps         | 42 kbps  | > 25 kbps    | > 50 kbps        |
| 12.5 kHz     | 42 kbps         | 83 kbps  | > 50 kbps    | > 100 kbps       |
| 25 kHz       | 83 kbps         | 167 kbps | > 100 kbps   | > 200 kbps       |
| 50 kHz       | 167 kbps        | 333 kbps | > 200 kbps   | > 400 kbps       |
| 100 kHz      | -               | 555 kbps | -            | > 700 kbps       |
| 150 kHz      | -               | 925 kbps | -            | > 1.1 Mbps       |
| 200 kHz      | -               | 1.1 Mbps | -            | > 1.4 Mbps       |
| 250 kHz      | -               | 1.3 Mbps | -            | > 1.7 Mbps       |
| 300 kHz      | -               | 1.7 Mbps | -            | > 2.1 Mbps       |

#### **Radio protocols**

- Transparent / Bridge
- Repeater(s) supported
- No collision avoidance capability
- Flexible / Router
  - Unlimited Tree topology
  - Multi-polling and report-by-exception concurrently
  - Nomadic mode automatic routing
- Base driven / Router
  - Star topology, repeaters supported
  - Optimized for TCP/IP (IEC104)
  - Fair distribution of channel capacity among all remotes

#### Long range

- One radio hop over 50 km
- Line of sight not required
- Carrier output power 0.1 10W
- Exceptional data sensitivity
- Any unit can work simultaneously as a repeater
- Unlimited number of repeaters on the way
  Any IP network can interconnect RipEX units
- Easy to configure and maintain
- Web interface or CLI via SSH
- Wizards fast and simple setup
- Non-intrusive management via USB using either ETH/USB adapter or WiFi/USB adapter with DHCP
- Fast remote access only the effective data are transferred over the air, html page downloaded from the local unit
- External flash disc automatic configuration, SW keys and FW upgrade

## Reliability

- Units tested in a climatic chamber and in real traffic
- Heavy-duty industrial components
- Industrial rugged die-cast aluminium case
- IP40 or IP51
- -40 to +70 °C
- 3 year warranty

#### **Diagnostics & Network Management**

- Statistic logs for interfaces and communication links
- Historical and on-line values displayed in graphs
- 20 periods (e.g. days) of history
- Watched values (RSS, Ucc, Temp, PWR, etc.) also from neighbouring units
- SNMP v3 including Traps and Informs
- HW Alarm input, HW Alarm output
- Monitoring Real time/Save-to-file analysis of communication over any of the interfaces

### Scalability

#### SW feature keys

- Advance features only when and where needed
- Router, Speed, COM2 (SFP), 10W, Backup routes, (Duplex), Master
- Free Master-key trial for 30 days in every RipEX

#### HW models

- The same HW for Base, Repeater or Remote stations
- Internal GPS module NTP synchronization - mPCle slot for expansion boards (RipEX2) GPS, 4G/3G/2G, 2x RS232...

## SCADA protocols

- Modbus, IEC101, DNP3, PR2000, Comli, DF1, Profibus, Async Link, C24, Cactus, RP570, Slip, Siemens 3964(R), IEC104, DNP3/TCP, Modbus TCP and others
- SCADA serial protocol addresses are mapped to RipEX addresses
- TCP(UDP) protocols can be handled transparently or using Terminal server or TCP proxy
- Embedded Modbus RTU / Modbus TCP converter
- Each packet is transferred as an acknowledged unicast

#### **Backup routes**

- Tested alternative paths between two RipEX units
- Automatic switch-over to backup gateway, if primary route fails due to packet loss or weak RSS
- Backup gateway can be behind Radio or Eth interfaces
- Unlimited number of Alternative paths
- Alternative path priority assignment

#### Energy savings

- Solar ready
- Sleep mode wake up triggered by Sleep digital input or by internal RTC (RipEX2)
- Save mode wake up by a received packet from Radio channel or by Sleep digital input

### **RipEX-HS**

- Fully redundant hot-standby master station
- Fully monitored
- Automatic switchover capability on detection of failure
- Auto toggle mode periodically switches units regardless of failure
- Two booted-up standard RipEX units inside
- Switch-over time < 2 s
- Two independent power supplies
- One or two antenna connectors
- Hot swappabble
- 19" rack 3U

# Technical parameters

| Radio parameters   | RipEX  | RipEX2   |  |
|--|--|--|--|
